READEX Tool Suite for Energy-efficiency Tuning of HPC Applications

Anamika Chowdhury

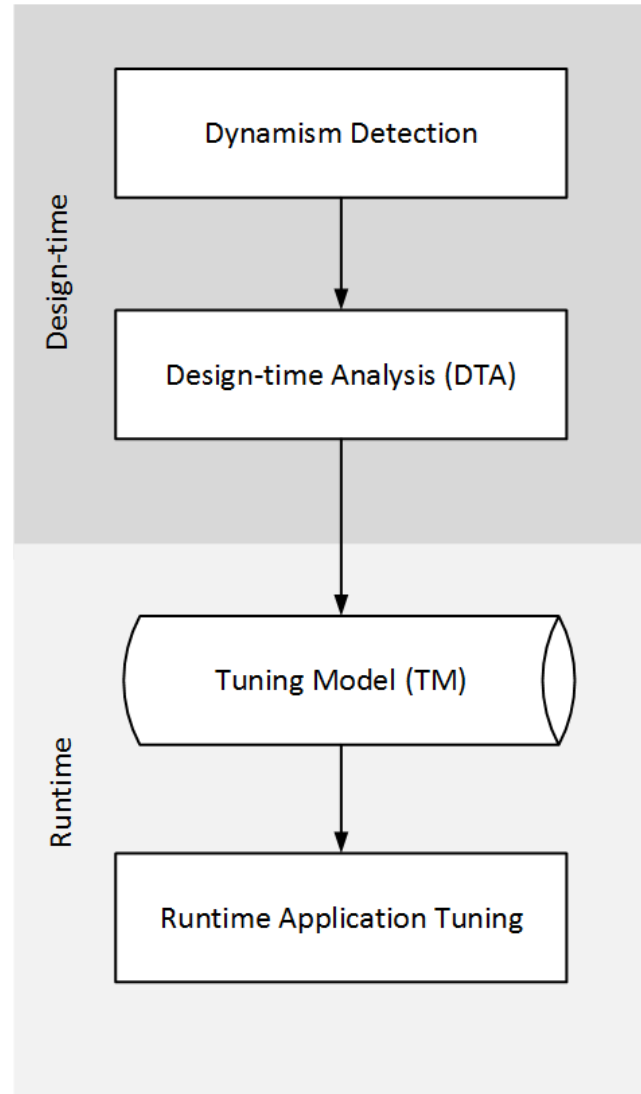

Project Overview

- **READEX:**
Runtime Exploitation of Application Dynamism for Energy-efficient eXascale Computing
- **Starting Date:**
1 September 2015
- **Duration:**
3 years
- **Funding**
European Commission Horizon 2020 grant agreement 671657
- **Collaboration with 6 other institutions all over Europe**

Objectives

- Tuning HPC applications dynamically for energy efficiency.
- Improve energy efficiency by influencing tuning parameters
- Switching between configurations
 - Exploit dynamic characteristics
- Develop tool aided auto-tuning methodology.
 - Design-time Analysis
 - Runtime Application Tuning
- Detect at design-time, exploit at runtime.

The READEX Tool Suite

Terminology: Phase Region and Phase

```
1 int main(void) {  
2  
3     // Initialize application  
4     // Initialize experiment variables  
5  
6     int num_iterations = 2;  
7     for (int iter = 1; iter <= num_iterations; iter++) {  
8         // Start phase region  
9         // Read PhaseCharct  
10        laplace3D(); // significant region  
11        residue = reduction(); // insignificant region  
12        fftw_execute(); // Significant  
13        // End phase region  
14    }  
15  
16    // Post-processing:  
17    // Write noise matrices to disk for visualization  
18    // Terminate application  
19  
20    MPI_Finalize();  
21    return 0;  
22 }
```

Phase region

Phase

Scenario

FREQ=2 GHz

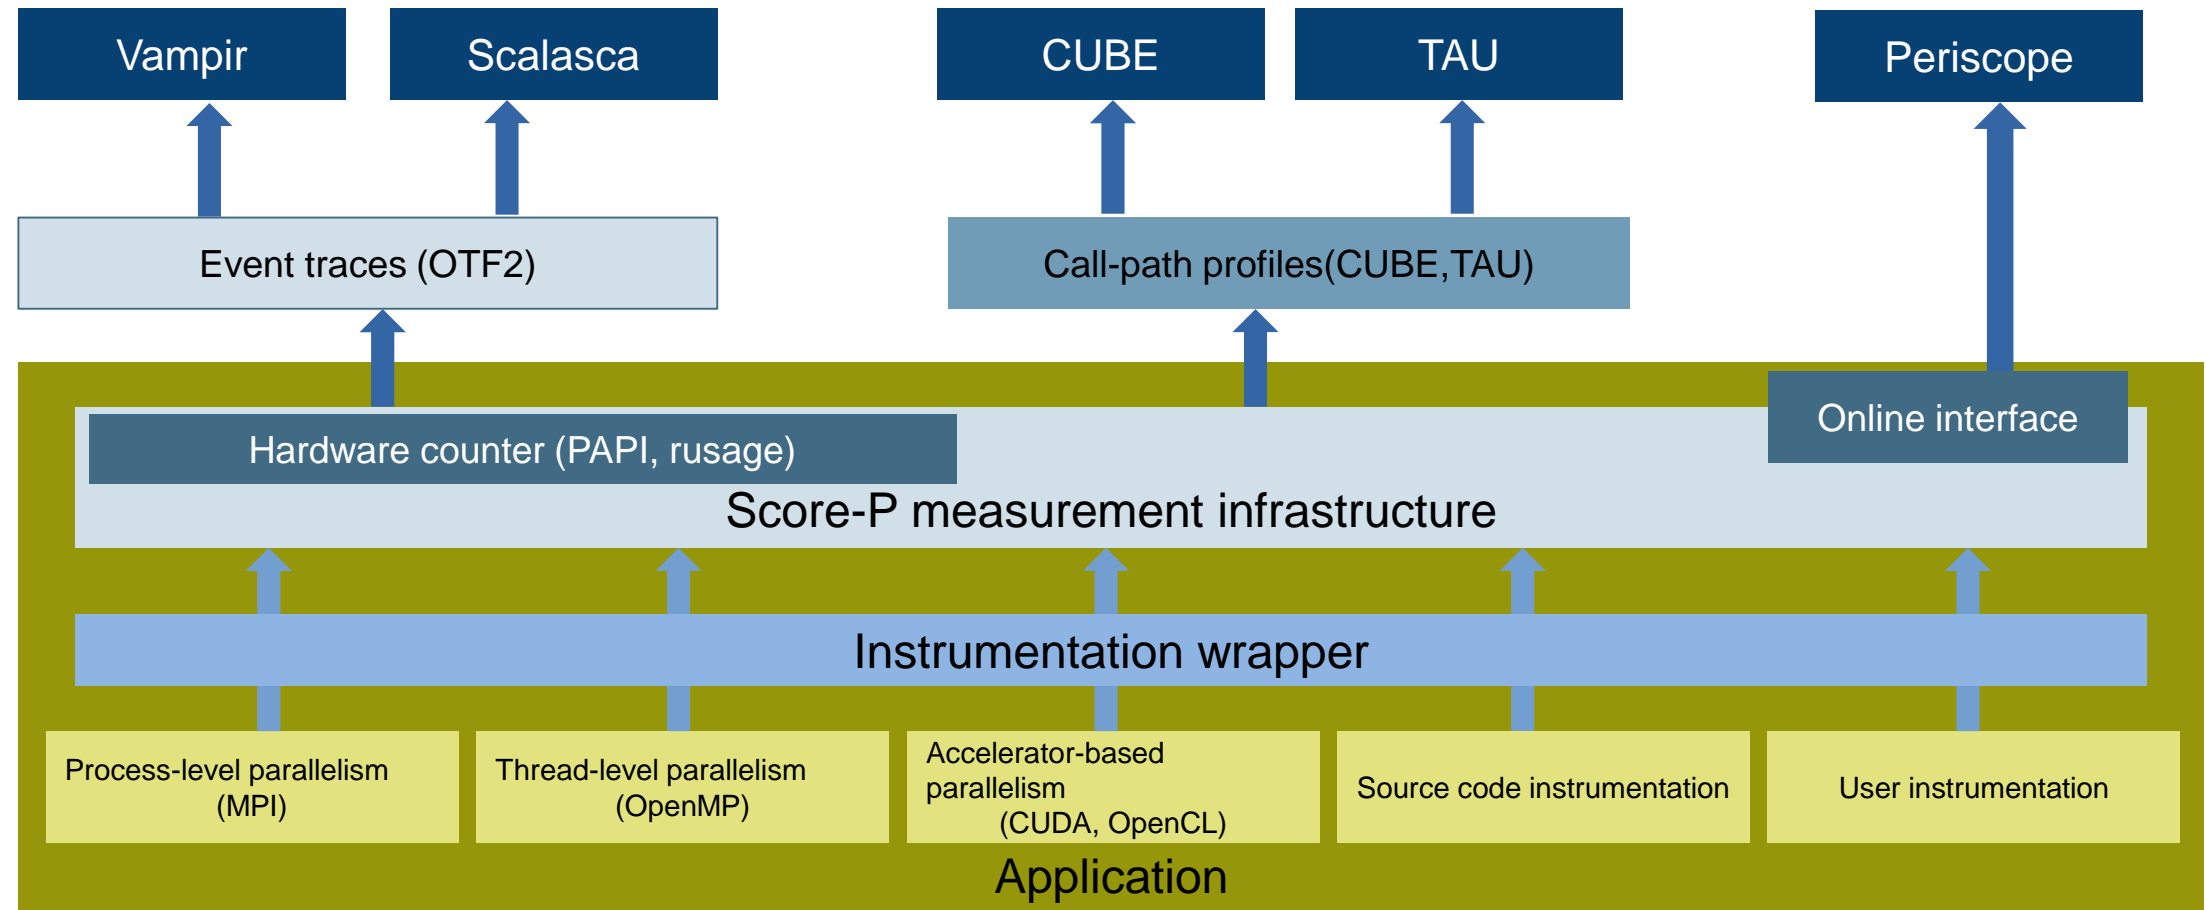

FREQ=1.5 GHz

Significant region

Runtime situation

Score-P

- Scalable Performance Measurement Infrastructure for Parallel Codes
 - Common instrumentation and measurement infrastructure

Periscope Tuning Framework (PTF)

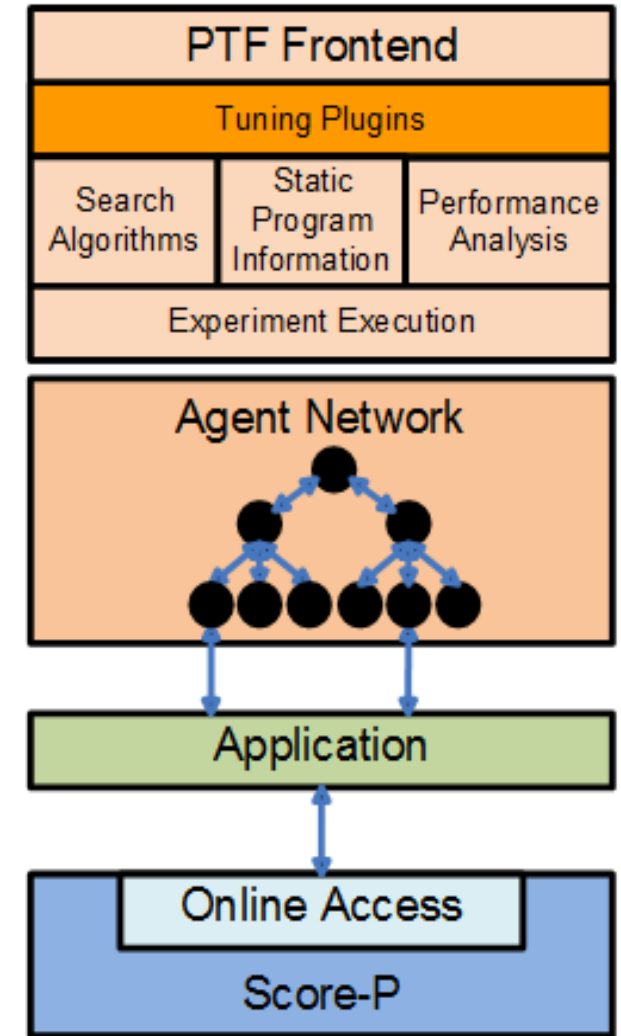

Automatic application analysis & tuning

- Tune performance and energy (statically)
- Plug-in-based architecture
- Evaluate alternatives online
- Scalable and distributed framework

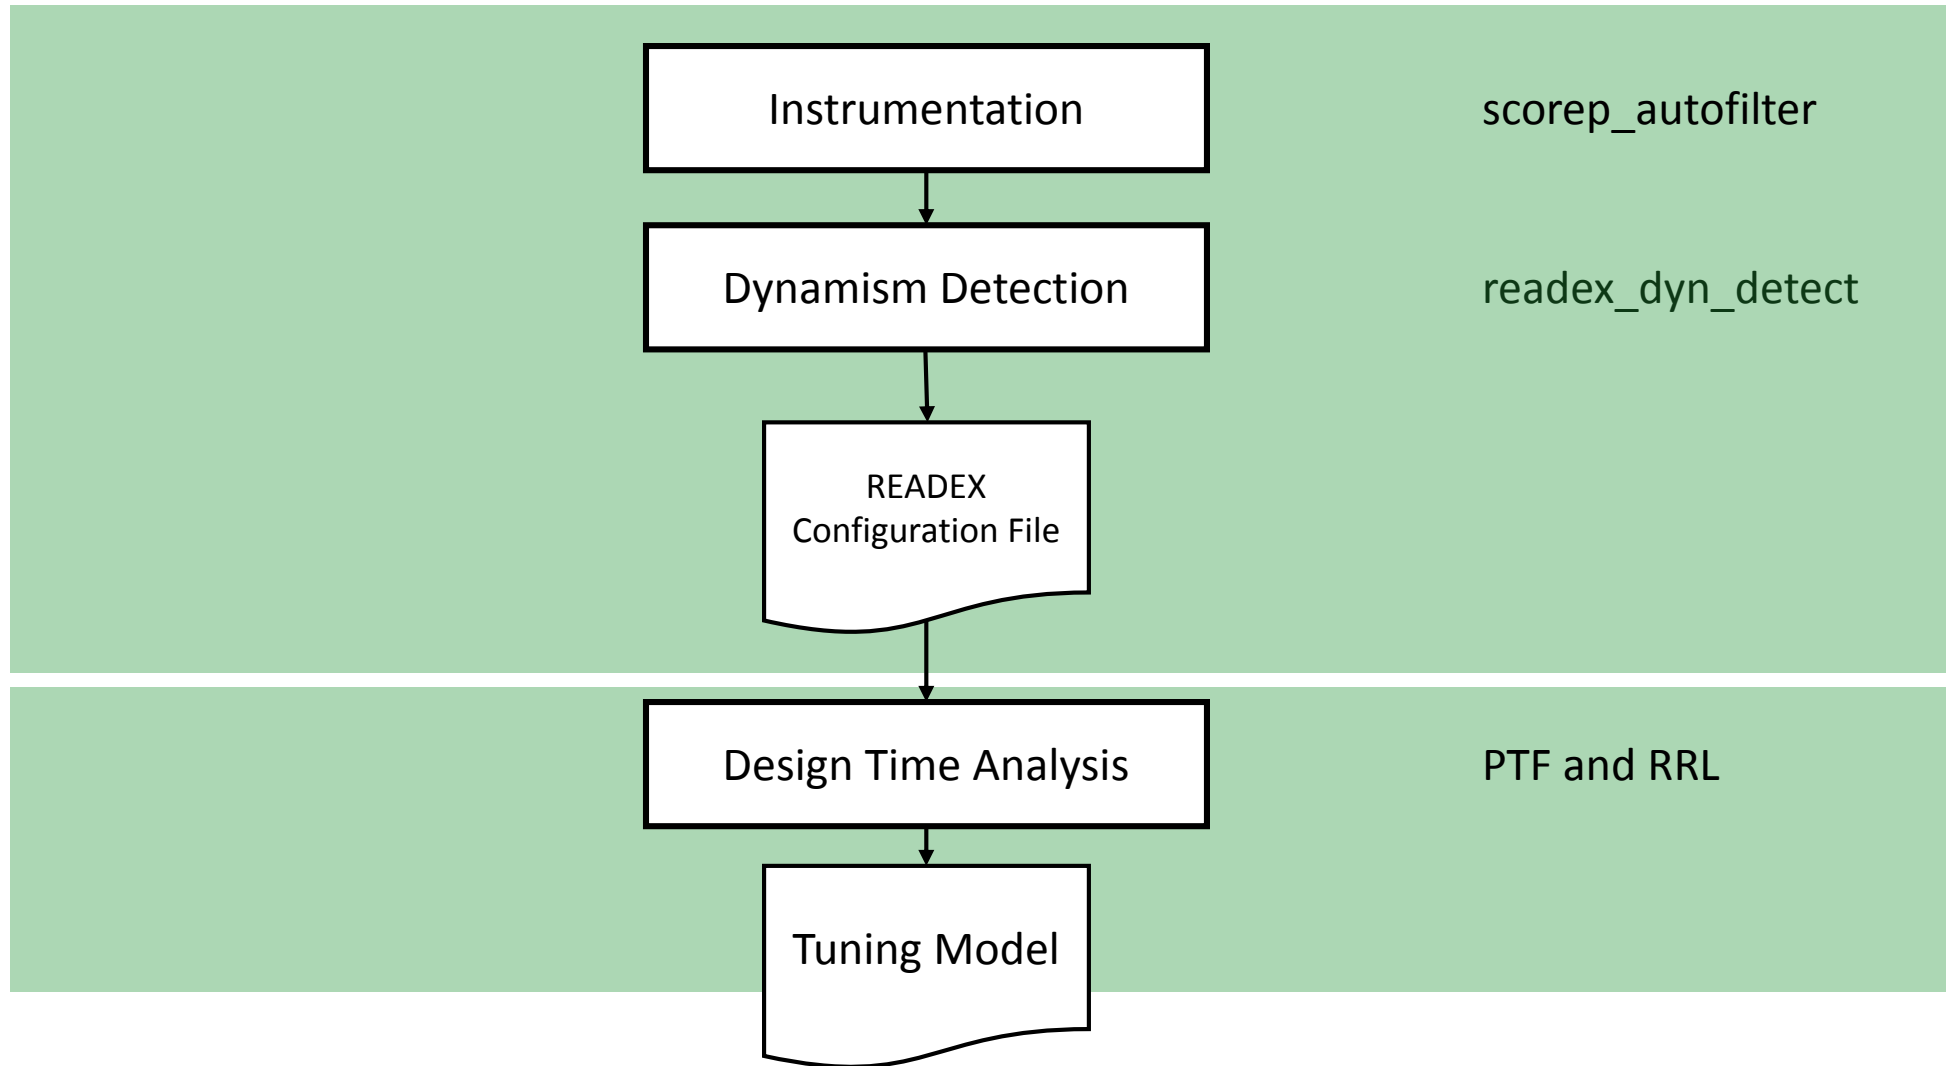

Support variety of parallel paradigms

- MPI, OpenMP, OpenCL, Parallel pattern

Developed in the AutoTune EU-FP7 project

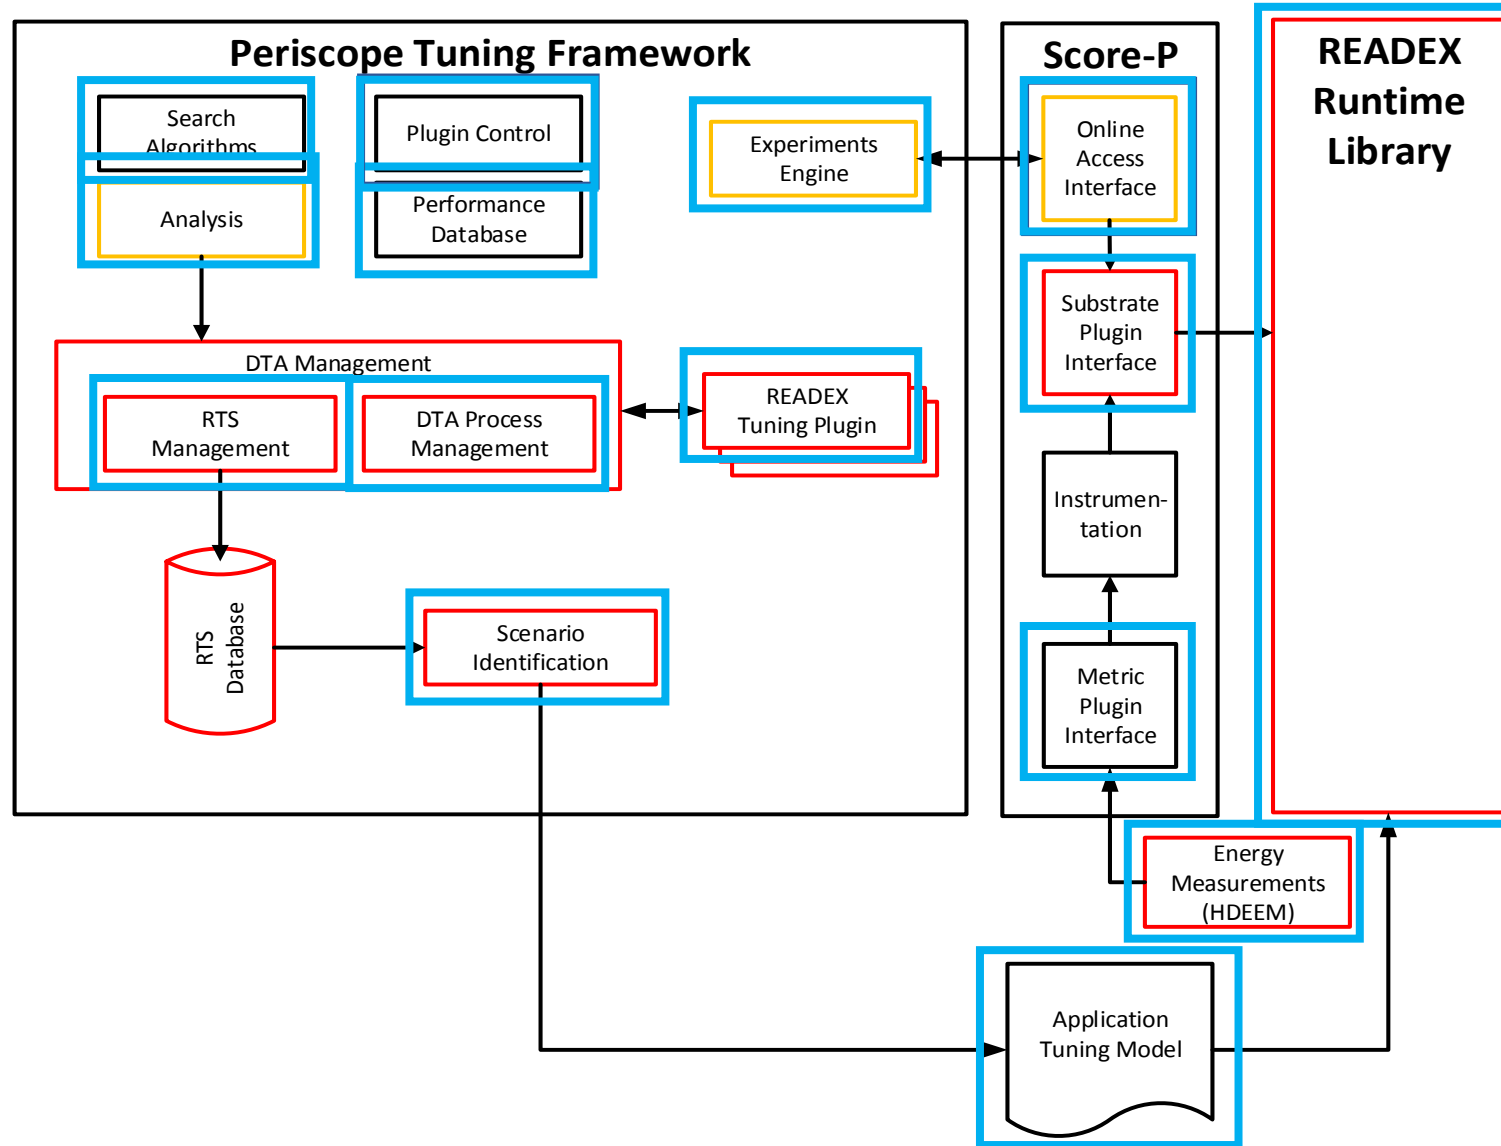

Design Time Analysis

READEX Tuning Plugin

- Tuning plugin supporting
 - Core and uncore frequencies, numthreads parameters
 - Configurable search space via READEX Configuration File
 - Several objective functions: energy, CPUenergy, EDP, EDP2, time
 - Several search strategies: exhaustive, individual, random, genetic
- Approach
 - Experiment with default configuration
 - Experiments for selected configurations
 - Configuration set for phase region
 - Energy and time measured for all runtime situations
 - Identification of static best for phase and specific best configurations for rts's

Pre-Computation of Configurations

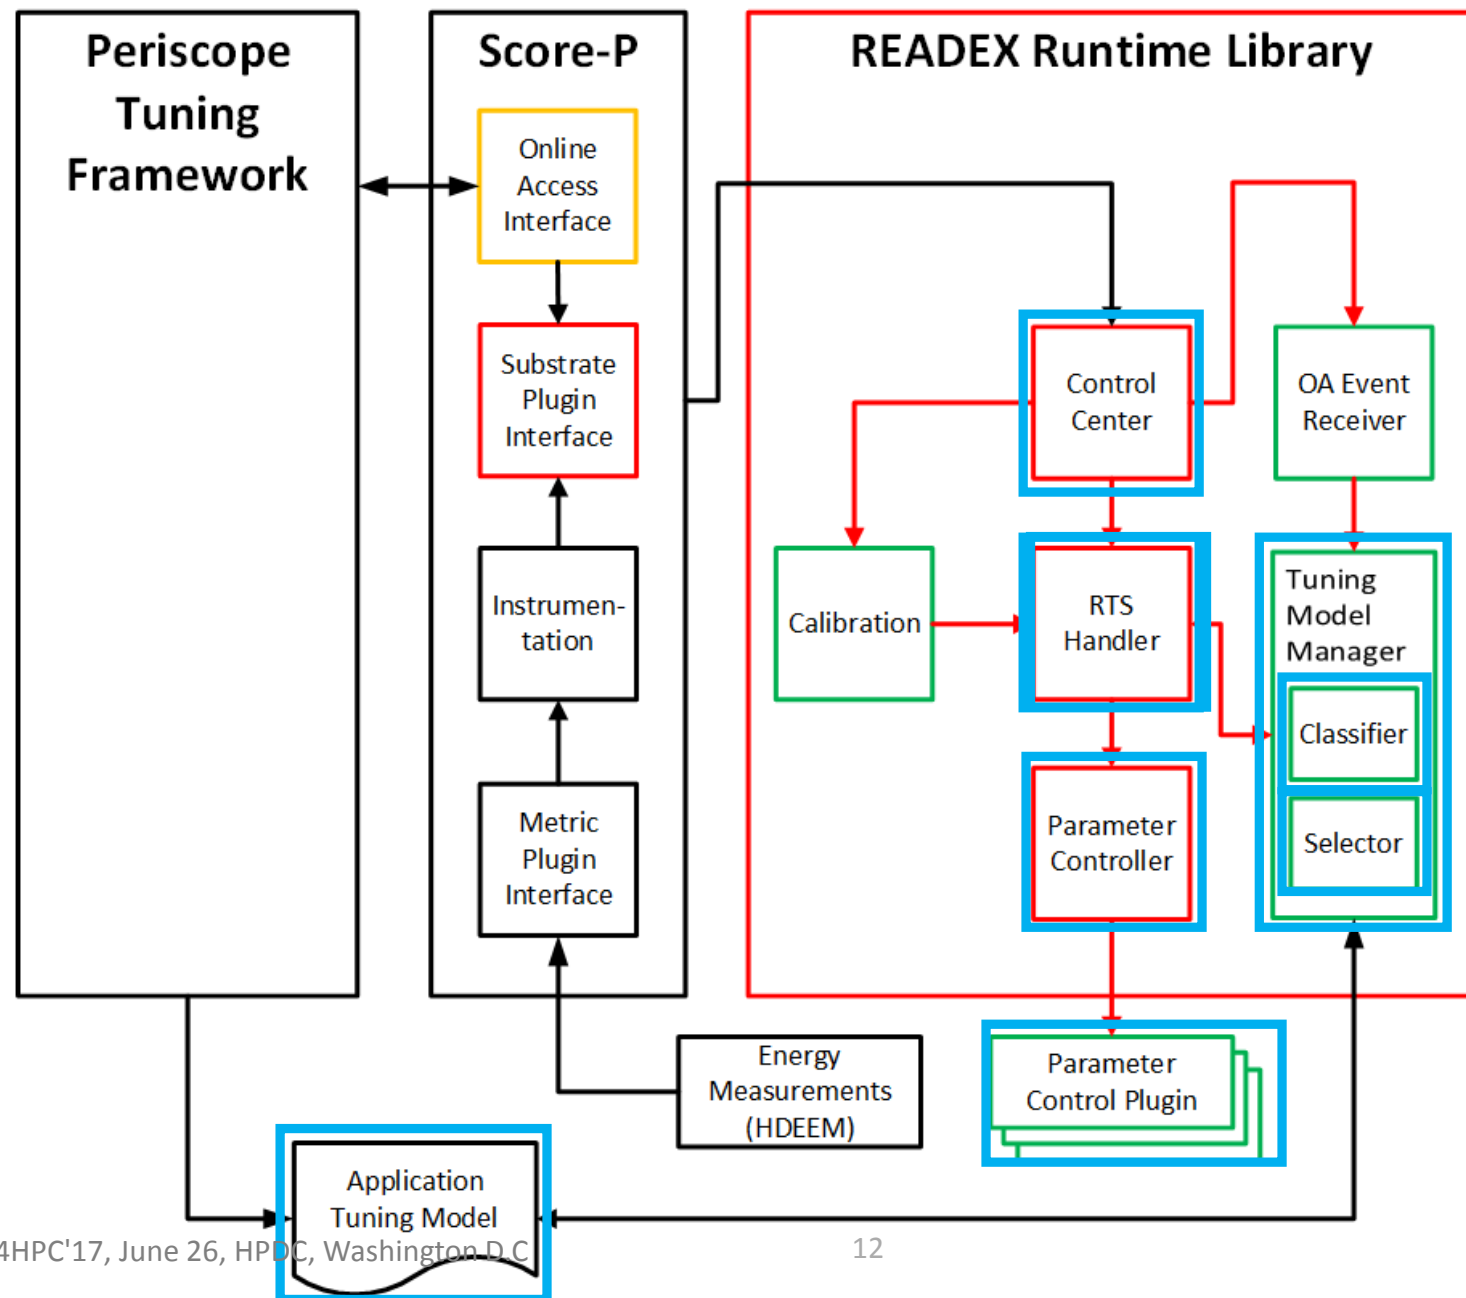

READEX Runtime Library (RRL)

- Runtime Application Tuning performed by the READEX Runtime Library.
- Tuning requests during Design-time Analysis are sent to RRL.
- A lightweight library
 - Dynamic switching between different configurations at runtime.
 - Implemented as a substrate plugin of Score-P.
- Developed by Technische Universität Dresden (TUD)

Runtime Scenario Detection and Switching Decision during Production Run

- During Runtime Application Tuning
- Scenario classification

- Switching decision component
- Manipulation of tuning parameters

Evaluation of DTA (NPB BT-MZ)

- 16 experiments, exhaustive search
- Significant regions found during dynamism detection
 - `exch_qbc`, `x_solve`, `y_solve`, `z_solve`

Significant regions (16 experiments)	Energy for worst static configuration (1, 1.6)	Energy for best static configuration (4, 1.6)	READEX Energy	# of thread	Core frequency
<code>exch_qbc</code>	3245	6649	2760	1	2.4
<code>x_solve</code>	74219	41341	39962	4	2.0
<code>y_solve</code>	73536	39497	39497	4	1.6
<code>z_solve</code>	76393	40699	40386	4	2.0
SUM	227393	128186	122605		
savings		43.60%	4.40%		
Energy for phase	376722	284223			
savings		24.60%			

Evaluation of DTA (LULESH)

- 64 experiments, exhaustive search

Significant regions	Energy for worst (16, 1.2)	Energy for best (1, 2.4)	READEX Energy	# of thread	Core frequency
CalcCourantConstraintForElems	6143	5375	5084	14	2.0
CalcKinematicsForElems	23816	15546	15546	1	2.4
CalcMonotonicQGradientsForElems	10833	7317	7116	15	2.4
CalcMonotonicQRegionForElems	14340	13238	12291	5	2.0
CalcVolumeForceForElems	109217	57075	57075	1	2.4
EvalEOSForElems	54791	30402	29837	3	2.4
SUM	219140	128953	126949		
savings		41,2%	1.6%		
Energy for phase	261980	167978			
savings		35,9%			

Evaluation of DTA (LULESH)

- 19 experiments, individual search

Significant regions	Energy for worst (16, 1.2)	Energy for best (1, 2.4)	READEX Energy	# of thread	Core frequency
CalcCourantConstraintForElems	6265	5097	5097	1	2.4
CalcKinematicsForElems	23328	15528	15399	4	2.4
CalcMonotonicQGradientsForElements	10645	7181	7021	15	2.4
CalcMonotonicQRegionForElems	14242	13011	12210	16	2.4
CalcVolumeForceForElems	108368	56151	56151	1	2.4
EvalEOSForElems	42172	27773	27773	1	2.4
SUM	205020	124741	123651		
savings		39.2%	0.9%		
Energy for phase	247782	162489			
savings		34.4%			

Conclusion and Outlook

- Inter-phase dynamism
- Handling multiple input files
- Domain knowledge specification
 - Allows the user to provide domain knowledge as *identifiers*.
 - Application Tuning Parameters
 - Input identifiers
- To know more about the project, go to <http://www.readex.eu/>
- Demo video can be shown after session
 - Also available on the project website.
